

# Subject Index

10 m deep building pit	111	coefficient of variation	165, 496
3D modelling	904	cohesion	973
acceptable risk	50	collocation based stochastic response	
aerial photographs	797	surface method (CSRSSM)	306
Afsluitdijk	509	Combined Pile-Raft Foundation	76
ambiguity	898	communication	123, 739
anomaly detection	400	compensation grouting	111
approximations	470	comprehensive evaluation	457
assessment and management of natural		concrete flow	608
hazards	559	conditional random fields	445
$\beta$ -factor	389	cone penetration test	165, 898
back-analysis	394	consequence	699
backward(s) erosion	849, 215	consequence of failure	489
Bayesian	933, 939	consolidation	394, 614
Bayesian updating	861, 958	contact dynamics	699
bearing capacity	371, 670, 689, 821, 828, 958	contract(s)	16, 275
bearing failure	377	contracting	129
bedding	797	contractual issues	590
bedding attitude	797	copulas	237
bedrock map	178	correlation	237
bending moments	634	cost(s)	123, 855
bentonite	608	cost-benefit analysis	256
berms	855	coupling method	227
Bloemendalerpolder	621, 628, 634	CPTU	910
bored pile	300	crosshole tomography	898
breach flow	522	crushed rock ring	389
breaching parameters	841	D-wall	577
bridge approach structure	602, 614	$d_{70}$	215
bridge foundation	545	dam failure	551
building information model	917	dam safety	551
building pit	608, 973	DBFM contracts	770
canal system	117	debris flow	540
capacity	275	deep excavation	639
case history	320	deep foundations	664
case study(ies)	150, 745	delay	123
cast in-situ piles	597	delta area	139
centrifuge	347	deposition	540
centrifuge model tests	353	design	482, 855, 873, 967
characteristic values	496	design approaches	464
CIRIA C517	482	deterioration model	413
clay	634	deterministic	716
cluster analysis	898	dewatering	973, 984
CMP-MVS code	785	diaphragm walls	93, 144, 400, 608
code calibration	50, 431	differential settlement	602, 614
code caribration	340	digital photogrammetry	785
		digital terrain model	785

dike(s)	215, 516, 528	flood risk	50, 528, 551, 841, 924
dike breaching	841	flood safety	516
dike safety	924	flow sliding	522
direct shear testing	808	focal element	203
disaster characteristics	457	footing	828
disaster prevention	457	FORM	300
discontinuous deformation analysis	227	foundation design	419
discrete failure	677	foundation reliability	23
dispersive clay	535	fragility curves	528
displacement hazard curve	221	frequentist	933
dumping modes	306	full-scale loading tests	313
Dutch design codes	867	full-scale test	608
dyke	364	full scale trial pit installation	577
dynamic axle load	243	gasworks	590
dynamics	191	GBInSAR	803
earth-fill dam	334	Geo Risk Management (GeoRM)	16, 123, 135, 150, 967
earthquakes	815	Geo-communication	111
economic design	973	Geo-database	178
economically attractive design	984	Geo-Impuls	16, 111, 123, 129, 135, 144, 150, 590, 597, 608, 621, 628, 634, 752, 765, 904, 973, 990
effective random dimension	3	Geo-Impuls program	621, 628, 634
empirical models	841	geologic profiles	159
engineering geology	540	geological faults	159
EOLE	445	geology	904
EPS Geofoam	602	geomorphic features	879
Eurocode	489	geophysics	889
Eurocode 7	464, 482, 496, 657, 689, 967	geostatistical analysis	910
evaluation settlement models	628	geostatistics	334, 889
excavation	36, 590	geosynthetics	431
excavation and monitoring	577	geotechnical baseline report	129
existing structures	389	geotechnical education	135
expansion optimal linear estimation method (EOLE)	328	geotechnical engineering	269, 383
exploratory soil investigation	191	geotechnical investigation	203
factor of safety	439, 722	geotechnical properties	945
failure	745	geotechnical risk	535, 739, 752
failure costs	990	geotechnical risk management (Geo-RM)	123, 752, 765, 990
failure envelopes	293	geotechnical risk management and risk communication	559
failure mode(s)	50, 522	geotechnical risks	111
failure process	227	geotechnical site characterisation	23
failure surface	716	geotechnical uncertainties	407
FE analysis	117	geotechnics	889
field monitoring	36	GeoTOP	904
field tests	165	GIS	797, 952
finite difference method	371	grain size distribution	215
finite element analysis	293	ground deformation	105
finite element method (FEM)	227, 464, 509, 639, 716	ground freezing	583
finite element modeling	377	groundwater drawdown	256
finite elements	389, 677, 704, 958	groundwater extractions	139
flood defences	237, 522		
flood defenses	50		
flood protection	924		

groundwater modelling	583	long slope	677
guideline	967	long term monitoring	621
hazard assessment	540	lower-bound	722
hazard levels	759	management of geotechnical risks	904
heave	861	management process-models	979
Hermite polynomial chaos expansion	184	MASW	178
heterogeneity	677, 924	measurements	939
heterogeneous slope	730	measures	93
Hoek-Brown failure criterion	670	measuring passive resistance	984
hydraulic conductivity	683	meta-modelling	445
hydrological disasters	503	microzonation	178
hydrological risks	583	MLIT	873
hydropower underground cavern group	645	model error	431
imprecise interval analysis	383	model uncertainty	722
imprecise probabilistic analysis	269	modelling	191
in-situ load test	76	models	889
inclinometer measurements	634	monitoring	93, 105, 545, 759, 803, 973, 984, 990
independent peer review	76	monitoring and observational method	150
infinite slope	439	Monte Carlo (MC) analyses	431
infrastructure	16	Monte Carlo method	917
Ingelsberg landslide	803	Monte Carlo simulation(s)	117, 209, 328, 371, 419, 710
integral risk management	770	MPS method	347
internal erosion	849	multi-criteria decision aid	419
irregular sampling pattern	159	multi-objective	394
ISO2394:2015-Annex D	3	multi-objective optimization	419
jointed rock mass	227	natural hazards	503
kriging	23, 178	near surface disposal	425
land-use	779	NEN8707	389
landslide	99, 699, 797, 803	non-destructive techniques	597
landslide dam	551	non-intrusive reliability analysis	184
landslides	250	nonlinear	347
landslides susceptibility	779	numerical analysis	482
lateral soil displacements	634	numerical solution	791
laterally loaded pile(s)	634, 657	observational	275
leakage	583	observational approach	939
levee(s)	50, 215, 509, 861, 867, 879	observational method	76, 545, 967, 973, 979, 984, 990
levee safety	568, 873	occurrence probability	945
levee safety inspection	873	offshore	23
life cycle	855	offshore design codes	821
life-cycle cost	413	offshore geohazards	815
limestone	973, 984	offshore geotechnics	293
limit analysis	263	optimization	394, 855
limit equilibrium method	716	organization	967
limit state	476	overconsolidated clay	577
limit state design	287, 407, 710	parameter estimation	834
limit-state method	377	partial factor(s)	364, 431, 470
liquefaction	522	passive resistance	973
lithology	779	peat	634
load and resistance factor design (LRFD)	3, 287, 340, 821	percussion drilling	917
load and resistance factors	287		
long continuous structure	117		

permeability	973	reliability and risk analysis of	
phreatic surface	509	geotechnical structures	559
pile foundation	340	reliability assessment	528
pile reliability	664	reliability based approach	320
pile resistance	470	reliability based design	496
pile systems	664	reliability calibration	470
piled embankments	431	reliability index	300, 689
pinhole test	535	reliability-based design	313
pipelines	867	relief pile	602
piping	215, 237, 568, 849, 855, 861, 873	relief wells	855
piping investigation	683	repeatability test	808
plastic shear zone	377	reputation	123
pore pressures	577	resilience	61
prediction	898	response surface	568
premature failure	358	retaining wall	489
prior knowledge	945	RFEM	704
probabilistic	716, 898	risk(s)	306, 407, 739
probabilistic analysis(es)	670, 710, 770, 855	risk allocation	129, 759
probabilistic approach	221	risk analysis	551, 815
probabilistic characterization	945	risk appetite	759
probabilistic site characterization	172	risk assessment	105, 150, 250, 256, 425, 645, 699
probability	828	risk communication	990
probability distribution	689, 730	risk document	150
probability of failure	313	risk evolution	144
probable maximum loss	451	risk management	61, 99, 129, 144, 191, 275, 400, 745, 759
procurement	979	risk management and communication	590
project management	123	risk maps	197
projectile penetration	516	risk mitigation	645
props	482	risk profile	973
proven strength	389	risk screening	939
pumping test	583	risk visualization	61
quality control	400, 597	roadway settlements	165
quantifying geotechnical uncertainty	904	rock mechanics	670
Quantile Value Method	3	rock surface model	917
Quantitative Risk Assessment	516	rotational pile	340
quarry backfill	808	safe bearing capacity	377
quay walls	407	safety	489
rainfall-induced landslide(s)	439, 791	safety assessment	522
random field(s)	23, 209, 281, 328, 689, 704, 834, 958	safety assessment model	306
random rainfall simulation	439	safety standards	50
random set theory	639	safety zones	867
random sets	203	sampling strategy	834
regression analysis	172	sand boils	215
regression model	945	scale of fluctuation	172, 834
reinforced soil walls	287	scenarios	924
reinforcement	608	schematization	924
reliability	50, 407, 677, 722, 803, 821, 861, 879, 933, 958	seepage	215, 849
reliability analysis	36, 287, 306, 568, 657, 730, 808	seepage failure	568
		seepage stability	873

seismic risk analysis	451	stochastic finite element method	184
seismic risk management	117	stochastic process	413
seismic slope stability	221	stochastic seepage	683
self-organizing inversion	898	strain measurements	984
Sellmeijer	237	stratigraphic setting	791
semi-probabilistic assessment	867	strength degradation	358
serviceability limit state (SLS)	313, 464	strength reduction	263
settlement(s)	275, 394, 545	strip footing	328
sewerage renewal	197	structure from motion techniques	785
shaft resistance	300	structures	407
shallow covers	791	strut forces	984
shallow foundation	545, 821	submarine landslides	815
shear wave velocity	178	subset simulation	439
sheet-pile wall	745	subset simulation approach	328
silty soil	958	subsidence	256
site investigation	172, 933	subsurface	924
site measurements	215	sustainability	139
skirted foundation	293	SWCC	281
sleeve friction	898	Swedish weight sounding	334
slope failure	250, 347, 353	swell	577
slope morphometry	779	system failure probability	209
slope reliability	184	system redundancy	664
slope safety	99	system reliability	664
slope stability	36, 263, 281, 704, 716, 808	test embankments	621, 628
slope stability analysis	710	thermal erosion	583
slope stability assessment	364	time-dependent reliability	358
slope stability model	952	track degradation	243
slopes	657	track geometry	243
soft clay	614	track settlement	243
soft soil(s)	476, 634	travel distance	250
software	263	tunnel project	61
soil classification	910	tunnel structure	413
soil erosion	551	tunneling	105
soil related risks	93	ultimate limit state (ULS)	328, 464
soil spatial variability	371, 710	uncertainty(ies)	23, 36, 269, 281, 347, 353, 383, 739, 855, 952, 979
soil treatment	535	uncertainty analysis	425, 645
soil variability	165	uncertainty soil conditions	973
soundings density	203	underground car park	93
sparse polynomial chaos		underground space	457
expansion(s)	445, 670	underseepage	879
spatial accuracy	785	undrained shear strength	476
spatial variability	159, 172, 178, 184, 215, 281, 293, 328, 334, 445, 657, 670, 683, 722, 730, 828, 834	unexploded ordnance	191
SPT	178	uniform level of reliability	3
stability	389, 489	unsaturated flow	439
static liquefaction	320	uplift	197, 855
statistical analysis	340, 503, 568	upper and lower probabilities	203
statistical uncertainty	933	urban groundwater management	139
steel strip walls	287	value of information analysis	256
stochastic	924	variability	23
stochastic fields	371	variation in soil conditions	973
		velocity distribution	683

virtual design and construction (VDC)	765	wave overtopping	509
VisualSfM code	785	weak layer	730
vulnerability	61	Wenchuan earthquake	250
water pressure measurements	984	wheel out-of-roundness	243
water supply system	451	wind turbines	516
water tightness	583	world war two	191
waterbalance measuring system	111	Zuidasdok	123
