Show only measures that meet budget?  
Overall importance  1-5
**Instructions**

In this sheet the properties of the building must be inserted. First fill in the right values in the orange cells. If there is a value entered that is not possible, a red warning square will appear.

For the questions please select an option in the drop-down menu.

The red squares in the corner of the cells indicate a comment. This comment will clarify the question.

In the sheet 'result' the result is visible of your project. Underneath 'Overall score' the colors indicate the best options for your specific project. The colors range from green (positive) to red (negative). The tree diagram indicate which building parts are better to focus on. When the path is green, this indicates that when these building parts are altered they have a more positive impact then the other building parts.

When the best measure are clear, please note the red squares in the corner of the cells where the measure is described. These cells have notes that will explain some of the risks that must considered during the renovation. Please advise these notes before considering applying a measure on your project.

The sheet measures show the different applicable measures. This is background information for the decision support model, you do not have to change anything here.
