APPENDICE

A. Diagrams accompanying chapter 3.
Fig. A1  Relationship between bending moment and tensile forces at grid line 7; test D 5.
Fig. A2  Relationship between bending moment and tensile forces at grid line 7; test D 105.
Fig. A3 Relationship between bending moment and tensile forces at grid line 7; test D 205.
Fig. A4 Tensile forces at grid line 7; tests D 5, D 105 and D 205.
Fig. AV Relationship between tensile forces and number of cycles at grid line 7.
Fig. A6 Relationship between bending moment and tensile forces at grid line 5; test D 5.
Fig. A7 Relationship between bending moment and tensile forces at grid line 5; test D 105.
Fig. A8 Relationship between bending moment and tensile forces at grid line 5; test D 205.
Fig. A9 Tensile forces at grid line 5; tests D 5, D 105 and D 205.
Fig. All Relationship between bending moment and tensile forces at grid line 11; test D 5.
Fig. A12 Relationship between bending moment and tensile forces at grid line 11; test D 105.
Fig. A13 Relationship between bending moment and tensile forces at grid line II; test D 205.
Fig. A14 Tensile forces at grid line 11; tests D 5, D 105 and D 205.
Fig. A15 Relationship between tensile forces and number of cycles at grid line 11; tests D 5, D 105 and D 205.
Fig. A16 Relationship between bending moment and tensile forces at grid line 2; test D 5.
Fig. A17 Relationship between bending moment and tensile forces at grid line 2; test D 105.
Fig. A18  Relationship between bending moment and tensile forces at grid line 2; test D 205.
Fig. A19  Tensile forces at grid line 2; tests D 5, D 105 and D 205.
Fig. A20  Relationship between tensile forces and number of cycles at grid line 2; tests D 5, D 105 and D 205.
Fig. A21 Relationship between shear forces and shear deformation at grid line 2; test D 5.
Fig. A22 Relationship between shear forces and shear deformation at grid line 2; test D 105.
Fig. A23 Relationship between shear forces and shear deformation at grid line 2; test D 205.
Fig. A26 Relationship between shear deformation and crack width at grid line 2; test D 5.
Figure 2: Relationship between shear deformation and crack width at grid.
Fig. A26  Relationship between shear deformation and crack width at grid line 2; test D 205.
Figure 2: Relationship between shear deformation and number of cycles at different grid endpoints.
Fig. A28 Relationship between shear forces and shear deformation at grid line 11; test D 5.
Fig. A25. Relationship between shear forces and shear deformation at grid line 11; test D105.
Fig. A30 Relationship between shear forces and shear deformation at grid line 11; test D 205.
Fig. A31 Relationship between shear deformation and crack width at grid line 11; test D 5.
Fig. A32: Relationship between shear deformation and crack width at grid line 11; test 0 105.
Fig. A33 Relationship between shear deformation and crack width at grid line 11; test D 205.
Fig. A34 Relationship between shear deformation and number of cycles at grid line 11; tests D 5, D 105 and D 205.
Fig. A35. Relationship between shear deformation and number of cycles at grid line B near grid line 11; test D 205.
Fig. A36  Relationship between shear deformation and number of cycles in the longitudinal joints between grid lines 1 and 2; tests D 5, D 105 and D 205.
Fig. A37 Relationship between shear deformation and crack width at grid line B near grid line 11; test D 205.
Fig. A33: Relationship between tensile force and crack width at grid line 7, test 0.5.
Fig. A39 Relationship between tensile forces and crack width at grid line 7; test D 105.
Fig. A10: Relationship between tensile forces and crack width at F1148.

Line 7: Test 0 205.
Fig. A41 Crack width at grid line 7; tests D 5, D 105 and D 205.
Fig. A42 Relationship between crack width and number of cycles at grid line 7; tests D 5, D 105 and D 205.
Fig. A3: Relationship between tensile forces and crack width at grid line 5; tests b, 5, b 105 and b 205.
Fig. A44 Relationship between crack width and shear forces at grid line 5; tests D 5, D 105 and D 205.
Fig. A45 Relationship between crack width and number of cycles at grid line 5; tests D 5, D 105 and D 205.
Fig. A46  Relationship between crack width and tensile forces at grid line 11; test D 5.
Fig. A7. Relationship between crack width and tensile forces at grid line 11, test D 105.
The relationship between crack width and tensile force at grid points 11A, 11B, 11C, and 11D is illustrated in the diagrams. The data collected during the test at 0.205 mm crack width is compared with the calculated values.
Fig. A49: Relationship between crack width and shear forces at grid line 11; test 0.5.
Fig. A50  Relationship between crack width and shear forces at grid line 11; test D 105.
Figure A51: Relationship between crack width and shear force at梁端。
Fig. A52 Crack width at grid line 11; tests D 5, D 105 and D 205.
Fig. A53  Relationship between crack width and number of cycles at grid line 11; tests D 5, D 105 and D 205.
Fig. A54: Relationship between tensile forces and crack width at grid line 2, test D 5.
Fig. A55 Relationship between tensile forces and crack width at grid line 2; test D 105.
Fig. A56: Relationship between tensile forces and crack width at grid line 2; test D 205.
Fig. A57
Relationship between crack width and shear forces at grid line 2, test D 5.
Fig. A58  Relationship between crack width and shear forces at grid line 2; test D 105.
Fig. A59  Relationship between crack width and shear forces at grid line 2; test D 205.
Fig. A60 Crack width at grid line 2; tests D 5, D 105 and D 205.
Fig. A61. Relationship between crack width and number of cycles at grid line 2; tests D 5, D 105 and D 205.

CRACK WIDTH AT GRID LINE 2 (x10E-3 MM)

CRACK WIDTH AT GRID LINE 2 (x10E-3 MM)

CRACK WIDTH AT GRID LINE 2 (x10E-3 MM)
Fig. A62 Relationship between the total horizontal load and lateral deflection of the floor bay in D7; test D 5.
Fig. A63  Deflection and increasing of deflection of the floor bay by $Q=12$ kN; test D 5.
Fig. A64  Relationship between the total horizontal load and lateral deflection of the floor bay in D7; test D 105.
Fig. A65  Deflection and increasing of deflection of the floor bay by \( Q = 12 \) kN; test D 105.
Fig. A66 Relationship between the total horizontal load and lateral deflection of the floor bay in D7; test D 205.
Fig. A67  Deflection and increasing of deflection of the floor bay by $Q=12$ kN; test D 205.
deformation in the transverse joints by $Q=12$ kN and $Q=-12$ kN; tests D 5, D 105 and D 205.
Fig. A69 Deformation of the end of the floor bay at grid line 1 by a total load of Q = 12 kN and Q = 12 kN; tests D 5, D 105 and D 205.

Expiry Date

01 Aug. 2006

Verlengen
Tot en met de vervaldatum kunt u informatie-
media (mits deze niet gereserveerd zijn)
as volgt verlengen:
• online in de Bibliotheekcatalogus
  (kies ‘User Account’)
• bij de Informatiebalie
• per e-mail of telefoon
Voor nadere informatie kunt u de helpfunctie
in de Bibliotheekcatalogus raadplegen.

To Renew
Up to and including the expiry date you can
renew information media (provided these
have not been reserved):
• online through the Library Catalogue
  (choose ‘User Account’)
• at the Information desk
• by e-mail or telephone
Please look under the help button in the
Library Catalogue for additional information.
