Sustainable developments and measurements are being taken all over the world, in all sorts and kinds. Still many steps need to be taken, and conflicting interests need to be solved, but the awareness and care for our environment has never been in better shape than today. This is a very promising and challenging development that would only work much more efficient and effective, if it were coordinated worldwide. The UN Headquarters of Sustainability, or UN Environmental Council, will be the home base for this worldwide coordination of sustainable measurements.

The position within the realm of sustainability, ‘It will be an architectural icon of sustainability that will represent ... This is the position that the building will have as a beacon of sustainability to the international community. What position will the UNEC have in the international community? The UN Security Council has the primary responsibility, under the Charter, for the maintenance of international peace and security. ‘The UNEC should be a development of a coordina...
Masterplan for the United Nations Environmental Council NYC

4. New slow pedestrian route
   - Create a new extra pedestrian route. A slower route with a sequence of space that slows down the pedestrians and extracts the user from the city with outside rooms.

5. New water element
   - Introducing new central water element to give direction and create visual and sound element.

6. Introducing new Green
   - Because of the lack of green in the city, new green will be introduced on and around the plot.

7. Expansion of New public space
   - Square and slow route / outside rooms

8. Impression of New urban design
