TU Delft Repository
You get published, they get a goat!

‘Goat’ to repository.tudelft.nl!
For every 1,000th publication deposited in the TU Delft Repository a goat is donated to a poor family in Bangladesh.
TU Delft Repository
You get published, they get a goat!

TU Delft scientific output available worldwide
TU Delft Repository is TU Delft’s digital source for publicly available scientific publications (full text, including bibliographic details). TU Delft students and scientists can use this digital storage facility for publishing their articles, dissertations, theses etc, making the material available to everyone on all five continents.

Reap the benefits!
You will encounter a number of benefits from uploading your scientific article to the Repository:
• Your articles will be stored safely and reliably. They will be accessible through a permanent link;
• Popular search engines such as Google Scholar and Yahoo! will locate your publications with a high relevance ranking;
• You will have a greater chance of being cited;
• A more general benefit is that TU Delft research results will be rapidly available and accessible.

Uploading articles
Do you want to put your scientific publications in TU Delft’s digital showcase? It’s easy. If you send a full-text PDF along with your registration in METIS, your publication will be automatically included in the Repository, as long as your research group has made these arrangements with the TU Delft Repository management. Does your research group not have a direct link to the Repository, or do you have old publications that you would like to have online? You can publish your work directly through http://repository.tudelft.nl. Students can also use this link for uploading their Bachelor’s or Master’s theses.

Benefits for you, for TU Delft and... a Bangladeshi family
Scientists fill the Repository with knowledge, but they can also make use of the knowledge it contains for the further benefit of science and humanity. TU Delft also reaps the rewards of making scientific material available through greater name recognition both on and off campus. The benefits are so great, that we want to give something back to the world: for every 1000th publication that is uploaded to the Repository, we will donate a goat to a family in Bangladesh through Oxfam Novib. A great deal of thought went into the decision to donate goats through this charity: goats mow the grass and fertilize it so that it grows again and they can continue eating. Goats are a great benefit to these Bangladeshi families: they invest in the goat and they get something in return.

The TU Delft Repository is managed by TU Delft Library.
